

PROFESSIONAL SUMMARY

Final-year B.E. (CSE – Data Science) student with hands-on experience across three end-to-end data analytics and data science projects spanning SQL-based exploratory data analysis, Python and Power BI business intelligence dashboards, and generative AI-assisted analytics workflows. Skilled in data wrangling, KPI reporting, dashboard development, and translating raw data into actionable business insights. Actively seeking a Data Analyst or Data Science internship / entry-level role to drive data-driven decision-making in a fast-paced environment.

TECHNICAL SKILLS

Languages & Querying: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (Joins, Window Functions, CTEs, Aggregations)
BI & Visualization: Power BI (Dashboards, Slicers, KPI Visuals, Drill-through), Microsoft Excel (Pivot Tables, VLOOKUP, Data Cleaning)
AI & Automation: Generative AI Tools, Prompt Engineering, N8N Workflow Automation, Motion AI
Version Control: Git, GitHub, Bitbucket
Core Competencies: Data Wrangling, Exploratory Data Analysis (EDA), KPI Reporting, Business Intelligence, Data Storytelling

WORK EXPERIENCE

AI Intern | Bharat Unnati AI Fellowship (Virtual) | [GitHub](#) Jan 2026 – Apr 2026

- Built 3+ AI agent workflows using Motion AI, automating task routing and decision-making for real-world business scenarios.
- Documented AI workflow designs and automation use cases in structured project reports presented to program mentors.
- Analysed automation workflow performance metrics in Excel, presenting task-completion efficiency insights to mentors.

PROJECTS

Retail Business Analytics Dashboard (Flagship Project) | [GitHub](#)
Python · Pandas · SQL · Power BI · Data Visualization

- Developed an end-to-end retail analytics solution on the Superstore dataset, analyzing sales, profit, customer segments, regional performance, and category-level trends using Python (Pandas).
- Wrote analytical SQL queries to calculate core business KPIs including revenue, profit margin, and regional/category performance.
- Built 3 interactive Power BI dashboards with KPI cards, sales trend analysis, profitability breakdowns, and regional performance views to simulate monthly business reviews.
- Documented the complete analytics workflow and technical approach in a project README for reproducibility.

AI-Assisted Data Analytics | [GitHub](#)
Python · Pandas · SQL · Power BI · Generative AI

- Built an AI-assisted business analytics solution combining Python, SQL, Power BI, and generative AI to accelerate the insight-generation pipeline.
- Performed business understanding and exploratory analysis in Python (Pandas), then generated KPIs and business metrics using SQL aggregation queries.
- Developed interactive Power BI dashboards to visualize revenue, profit margin, and customer trends.
- Leveraged generative AI to auto-generate business insight narratives and reports, demonstrating how GenAI can enhance traditional analytics and decision support.

Exploratory Data Analysis Using SQL | [GitHub](#)
SQL · Data Analysis · Business Analytics

- Performed exploratory data analysis on customer, product, and sales datasets using advanced SQL.
- Conducted dimensional and measure analysis, ranking analysis, geographic analysis, and time-based trend analysis using joins, aggregations, window functions, and CTEs.
- Uncovered customer behaviour, product performance, sales trends, and regional insights through structured analytical SQL queries.
- Documented the complete data model and analytical approach in a comprehensive README.

EDUCATION

B.E. – Computer Science & Engineering (Data Science), Sai Vidya Institute of Technology	2026	CGPA: 8.6
Pre-University (PCMC), Nagarjuna PU College	2022	80.5%
SSLC, Florence English High School	2020	79%

ACHIEVEMENTS

- Ranked 3rd in the 6th Semester of B.E. CSE (Data Science) based on academic performance.
